

msdsBinders Instrumental in Implementing RBS Bulk Systems Safety Policies

Introduction

RBS Bulk Systems is a bulk liquid transportation service throughout Western Canada and the United States. From location to location there is a large amount of different controlled and hazardous substances at each site.

Situation

RBS managed all their MSDSs internally. The process was exhaustive and challenging. Employees spent too much time shuffling paper. MSDS management was a growing concern, and RBS needed to find a more effective and efficient way to manage MSDSs and ERGs across their numerous locations and while transporting chemicals. For RBS, accurate MSDS management is essential to ensure both safety and compliance while transporting a broad range of products for their customers.

“msdsBinders has become an integral component of our health & safety program and I would recommend it without reservation”

Tyler Morse, Manager of HSSE, RBS Bulk Systems

Solution

Tyler Morse, Manager of HSSE, sees a lot of value in the msdsBinders system, "The regular maintenance, tracking, and education of the company's products and corresponding SDS' can be at times a very difficult and time-consuming task. Since using the msdsBinders and the services of Chemscape Safety Technologies to facilitate our Companies SDS', it has changed the game for us. What was once a very time and labour-intensive task, is now simplified and easily accomplished. Interaction with the Chemscape staff is frequent and the response is always timely. Support is superb. Improvements in the system are ongoing and input always welcome. They have been very reasonably priced, and always do exactly what we ask of them."

Results

- Proactive health and safety management
- Educated and trained staff
- Adhering to government regulations
- Minimized risks through improved information for emergency responses and actions
- Truck drivers now have up-to-date MSDSs on the road and access to Emergency Response Guides
